CERTIFICATIONS

KRITI INDUSTRIES (INDIA) LIMITED

PLOT NO. 13/1, TARPURA, PLOT NO.75-86, SECTOR II, PITHAMPUR,
DIST. DHAR – 454 775, MADHYA PRADESH, INDIA.

Bureau Veritas (India) Pvt. Ltd. (Certification Business) certify that the Management System of the above organisation has been audited and found to be in accordance with the requirements of the Management System Standards detailed below

Standards

ISO 9001:2015, ISO 14001:2015 & ISO 45001:2018

Scope of certification

DESIGN, MANUFACTURING AND DISPATCH OF

A) EXTRUDED PLASTIC PIPES, DUCTS, MOLDED FITTINGS, SUCTION AND GARDEN PIPE, WATER TANK AND COMPONENTS FOR THE APPLICATION IN THE INDUSTRIES LIKE AGRICULTURE, INDUSTRIAL, POTABLE WATER, ELECTRICAL, ELECTRONICS, TELECOMMUNICATION, AUTOMOBILE, GAS.

B) DRIP IRRIGATION SYSTEM & REQUIRED ACCESSORIES, CONSUMER DURABLES.

Original cycle start date: **14 January 2021**
Expiry date of previous cycle: **Not Applicable**
Certification Audit date: **21 October 2020**
Certification cycle start date: **14 January 2021**

Subject to the continued satisfactory operation of the organization's Management System, this certificate expires on: **13 January 2024**

Certificate No. **IND.20.11095/IMN** Version: **1** Revision date: **14 January 2021**

Certification Authority
Jagdish N. MANIAN
Head – CERTIFICATION, South Asia
Commodities, Industry & Facilities Division

Local office: Bureau Veritas (India) Private Limited (Certification Business)
72 Business Park, Marol Industrial Area, MIDC Cross Road 'C',
Andheri (East), Mumbai – 400 093, India.

Further clarifications regarding the scope of this certificate and the applicability of the management system requirements may be obtained by consulting the organization.
To check this certificate validity please call **+91 22 6274 2000**.

TECHNICAL INFORMATION

CPVC Pipes

- according to the water usage & pressure.
- Use Solvent Cement to join the CPVC Pipes at the site/location. Make sure to seal off the end squareness properly.
- For stronger pipe jointing, give enough curing time after fitting the pipes (with solvent cement).
- Pipelines should be given support through pipe clip or bolt at a distance of 0.5 m (horizontally) & 0.8 m (vertically).
- If the pipe is to be hidden/planted inside the wall, make sure to test the pipe for hot water application.
- The ON/OFF outlets of the geyser should be checked during the installation.
- Do not put extra pressure on pipes and fixtures while fitting.

UPVC Pipes

- Do's**
- As per your needs, we request you to purchase pipes and other related materials from the company's authorized dealers only in the company's designated packing. Store the pipes and other related materials in a cool & dry place.
 - If you notice any cracks/holes on the pipe then you should cut the pipe, leaving 25 mm space from both sides.
 - You should roughen the pipe, before joining it. Uniformly apply solvent cement on top of the pipe and inside the socket then turn the pipe 90°- 180° to place it in the socket.
 - You should be careful while fixing the pipe to see that no sharp edge tool collides with it.
 - If you are using a clip, while fixing the pipe then it should be done as per the base distance.
 - If the pipe is under direct sunlight, then you should apply water-based paint to it.
 - Check all the joints before sealing off with mud when installing the pipe on the ground.
 - If you have to bend the pipe, then it should be done after heating it in transformer oil.

Don'ts

- No sharp-edged materials or iron hooks should be used for holding the pipe.
- Do not let the pipe come in direct contact with the fire.
- Do not throw the pipe from a greater height. You should avoid walking and placing any heavy material on the pipe.
- No liquid substance should be mixed with the solvent cement. Before using the solvent cement, its expiry date should be checked.
- The pipe and fittings should not be coated with any petroleum products, oil or inflammable products.
- PVC pipes and fittings should not be used for the transportation of air and gas.

SWR Pipes

Do's

- Only use UV stabilized SWR pipes. A rubber ring pipe is suitable for sewage. UV stabilizers do not work on regular PVC pipes. They are affected by sunlight & weather.
- Clean the sides & inner part of the socket. Also, make sure the ring is properly inserted into the socket.
- Cut the pipe in a straight direction. File the pipe at an angle of 15 degrees using medium sandpaper.
- Use rubber lubricant to join rubber ring pipes.
- Apply rubber lubricant on the edges & ring and pour it into the socket while slowly rotating the pipe.
- For a longer life & use, insert the pipe completely in the socket & then pull the pipe 10 mm out of the socket so it can easily contract & expand.
- Check all the joints before sealing off with mud when installing the pipe on the ground.
- If you have to bend the pipe, then it should be done after heating it in transformer oil.
- Check the pipe thoroughly before hiding it.
- For horizontal pipelines, use socket pipes joined by solvent cement. For vertical

pipelines, use rubber ring pipes.

- For horizontal pipelines, the pipe clips should be at a distance of 10x from the pipe Dia. For vertical pipelines, the pipe clips should be used at a distance of 1-2 m accordingly.

Don'ts

- No sharp-edged materials or iron hooks should be used for holding the pipe.
- Do not let the pipe come in direct contact with the fire.
- Do not throw the pipe from a greater height. You should avoid walking and placing any heavy material on the pipe.
- No liquid substance should be mixed with the solvent cement. Before using the solvent cement, its expiry date should be checked.
- The pipe and fittings should not be coated with any petroleum products, oil or inflammable products.
- Pipes and fittings should not be used for the transportation of air and gas.
- Do not put extra pressure on the door cap to constrict/ fix it. Make sure the ring is in the proper place.
- Do not use smoke to test the pipeline. To test the pipeline, put a socket plug underneath and then fill the pipeline with water. Remove the socket after the testing.

Solvent Cement

- Shake the bottle before use.
- Mixing of primer or any material in the solvent cement should be avoided.
- Solvent cement takes more time to dry during the winter season. Give more time for the pipe joints to dry organically. Do not use any artificial method for drying.
- The joints of the pipes should not be disturbed/lifted till the solvent cement has dried.
